

Making Bird Feeders

Child A brought in two bottles so we could feed the birds.

We made two different feeders.

Feeder 1

Child A filled the bottle up with seed then we put the top on. We made some holes in the bottle and pushed through some pencils for the birds to sit on while feeding.

Child A said “the birds will be so happy. They hungry. They must be small ones or they will break them. Do birds like lots of seeds.?”

Adult has picked up on child’s motivators to take her learning forward so showing child A how easy it is to care for the birds

Feeder 2

I made holes in the top then threaded some string through. Child A then filled the bottle up with seed. We added a tray over the top then put the lid back on making small holes each side so the seed could come out onto the tray.
