

This child saw another child making instructions for her building. He got some paper with a robot on and a pencil. He made his own marks on the paper then held it up by his building.

"This his arms here. This his head." pointing to his bricks and the picture.

He carried on building "look at this I make it round. It don't go here for his arm" trying to put a brick up high then lowering it to balance on the bricks. He moved the paper robot around his road. But it kept falling over. I fixed it around a brick to stand up. He noticed the road was coming apart and went and got some tape fixing the bricks together. "It fix now"

This shows that he is developing his problem solving skills. Having flexible thinking by using ideas from others and changing them to suit his play. He also understands that print has a meaning.

HOW WE WILL SUPPORT

Offer him photo of his robot to remake, share with others, use his notes to re-create
